SUMMARY OF FINDINGS

NEW SOUTH WALES

TREND ESTIMATES

The trend estimate of **employed** people in NSW increased each month between March 1993 and January 1996. In February 1996 the estimate decreased slightly and stood at 2,801,800. This was 10.5% higher than the March 1993 trough.

EMPLOYED PERSONS, NSW

Trend

The trend estimate of **unemployed** people reached a peak of 315,500 in January 1993. The trend then generally fell, to reach a low of 228,800 in July 1995. It has since risen to stand at 231,900 in February 1996.

The trend **unemployment rate** reached a peak of 11.0% in the period December 1992 to March 1993. The rate fell to 7.6% in July 1995 and has remained at this level.

UNEMPLOYMENT RATE

Trend

The trend series **participation rate** was 62.7% in February 1996 compared to 62.1% in February 1995. In February 1996 the trend estimate of the **labour force** was 3,033,700 (6.6% above the April 1993 trough).

SEASONALLY ADJUSTED ESTIMATES

In February 1996, the seasonally adjusted estimate of **employment** in NSW was 2,791,200, compared to 2,798,300 in January 1996. Despite decreases in each of the last three months, the February figure was 72,500 (2.7%) higher than a year ago.

The seasonally adjusted estimate of **unemployment** was 234,400 in February 1996. This was 25,900 (10%) lower than in February 1995. Males represented 59% of the unemployed in February 1996, compared with 56% a year ago.

The seasonally adjusted **unemployment rate** fell from 7.8% in January 1996 to 7.7% in February. This compared to a rate of 8.7% in February 1995. The rate was 8.0% for males and 7.4% for females in February 1996.

The seasonally adjusted estimate of the **participation rate** fell from 62.8% in January 1996 to 62.5% in February. The rate was 72.9% for males and 52.6% for females. In February 1996 the seasonally adjusted **labour force** estimate decreased by 8,300 over the previous month to stand at 3,025,600.

REGIONS OF NSW

While the Labour Force Survey is designed primarily to produce reliable estimates at the national and State/Territory level, it also delivers estimates for a number of regions within States. As with national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding estimates at the State level — and are thus based on a considerably smaller sample size — they are subject to higher relative standard errors. Care should therefore be taken in interpretation of regional estimates, particularly month to month movements.

Sydney In February 1996 the estimate of the number of people **employed** in the Sydney Major Statistical Region (MSR) was 1,794,200. This was an increase of 35,700 (2%) in the 12 months since February 1995.

The **unemployment rate** was 7.8% in February 1996 compared to 9.1% in February last year. The rate was 7.9% for males and 7.6% for females.

The highest unemployment rates within Sydney MSR occurred in Fairfield–Liverpool Statistical Region (SR) with 17.6%, Central Western Sydney SR (14.3%) and Fairfield–Liverpool and Outer South Western Sydney SRs (12.9%).

The **participation rate** for Sydney MSR was 64.3% overall with a rate of 74.7% for males and 54.4% for females. Rates varied from 57.1% in Gosford–Wyong SR to 70.0% in Blacktown–Baulkham Hills SR.

Balance of NSW In February 1996 the number of **employed** people in this area of NSW was 977,400, an increase of 36,200 (3.8%) over the past year.

The **unemployment rate** in February was 10.0% compared to 10.9% in January and 10.8% in February last year. The unemployment rate varied from 6.3% in Northern, Far West–North Western and Central West (SRs) to 13.4% in Richmond–Tweed and Mid-North Coast (SRs).

The **participation rate** for the Balance of NSW MSR was 59.9% in February 1996. The rate was 70.6% for males and 49.5% for females.

UNEMPLOYMENT RATE, REGIONS OF NSW, FEBRUARY 1996

Sydney MSR

Balance of NSW MSR

AGE

In February 1996, unemployment rates were highest for 15–19 year olds (20.7%) and 20–24 year olds (12.7%) and lowest for 45–54 year olds (5.8%). The unemployment rates for both 15–19 year olds and 20–24 year olds were slightly lower than 12 months ago.

An estimated 41% of unemployed 15–19 year olds were looking for part-time work, the majority being students studying full-time. For teenagers who were not full-time students, the unemployment rate in February 1996 was 20.1%.

Part-time workers represented an estimated 23% of all employed people in February 1996, but this proportion varied between the age groups. The highest levels were among those aged 15–19 years with 56% and those aged 65 years and over with 36%.

DURATION OF UNEMPLOYMENT

In February 1996 the **long term unemployed** (people unemployed 52 weeks and over) represented 30% of all unemployed people. This compared with 37% a year earlier. The average duration of unemployment was 53 weeks in February 1996 compared to 59 weeks the previous February. Average duration of unemployment increased with age reaching an average of 75 weeks for people aged 45 years and over.

AVERAGE DURATION OF UNEMPLOYMENT, NSW

INDUSTRY AND OCCUPATION

The industries with the largest number of employees in NSW in February 1996 were *Retail trade* with 412,800 (or 15% of the total) and *Manufacturing* with 362,000 (13%).

These industries also employed the largest number of people in Sydney MSR with 257,400 (14%) in *Retail trade* and 251,000 (14%) in *Manufacturing*. *Retail trade* had the largest number in Balance of NSW MSR with 16% followed by *Agriculture, forestry and fishing* (12%) and *Manufacturing* (11%).

The largest occupation group in NSW was *Clerks* with 482,800 employees (17% of the total) followed by *Salespersons and personal service workers* (17%). *Clerks* were also the largest occupation group in Sydney MSR with 20% of the total while *Labourers and related workers* were the largest group in Balance of NSW MSR with 18%.

Between February 1995 and February 1996, there were increases in employment in all occupation groups except *Labourers and related workers*.

SUMMARY OF FINDINGS

AUSTRALIAN CAPITAL TERRITORY

Note: Seasonally adjusted estimates are not available for the ACT.

TREND ESTIMATES

The trend estimate of the number of **employed** people in the ACT was 157,600 in February 1996. The estimate increased each month between February 1995 and October 1995, but has since declined.

EMPLOYED PERSONS, ACT

Trend

The trend estimate of **unemployment** was 12,500 in February 1996 compared with 11,600 in February 1995.

Trend estimates of the **unemployment rate** in the ACT reached a high of 8.5% in July–August 1992. In the last 12 months, the rate has fluctuated between 7.0% and 7.3%, which was the rate in both January and February 1996. The unemployment rate was 7.4% for males and 7.2% for females in February 1996.

UNEMPLOYMENT RATE

Trend

The **participation rate** was 73.4% in February 1996. The ACT labour force estimate was 170,100 in February.

AGE

In February 1996 the unemployment rate in the ACT was highest (31.4%) for people aged 15–19 years. The rate was 11.8% for people aged 20–24 years and 5.6% for those aged 25 years and over.

Nearly three-quarters of employed 15–19 year olds were working part-time, while approximately three-fifths of the unemployed in this age group were looking for part-time work. The unemployment rate for 15–19 year olds looking for full-time work was 42.9%.

Almost three-quarters of employed 20–24 year olds and 80% of people aged 25 years and over worked full-time. On average 20–24 year olds worked 33 hours per week and those aged 25 years and over worked 37 hours per week.

The labour force participation rate was 65.9% for those aged 15–19 years and 85.4% for those aged 20–24 years.

UNEMPLOYMENT RATE BY AGE, ACT

INDUSTRY AND OCCUPATION

In February 1996, one-quarter of all employed people in the ACT were employed in *Government administration and defence*, 13% were in *Retail trade* and 13% in *Property and business services*.

The largest occupation groups were *Clerks*, with 24% of employed people, and *Professionals* with 21% of the total. *Professionals* were the largest group for males with 24% and *Clerks* the largest group for females with 37%.

AVERAGE DURATION OF UNEMPLOYMENT, ACT

DURATION OF UNEMPLOYMENT

In February 1996 the average duration of unemployment in the ACT was 33 weeks. The average was 16 weeks for 15-19 year olds, 47 weeks for 20-24 year olds and 39 weeks for those aged 25 years and over.

The **long term unemployed** (people unemployed 52 weeks and over) represented 21% of all unemployed people in February 1996. This compared with 17% a year earlier.

NOTE

This publication contains estimates of the civilian labour force in NSW and the ACT derived from the Labour Force Survey component of the Monthly Population Survey, which is conducted on a sample basis throughout Australia.

Explanatory notes for the data contained within this publication can be found on Page 42.

Care should be taken in the interpretation of month-to-month movements in estimates. Survey estimates are subject to sampling and non-sampling variability as explained in the Technical note on Data Reliability on page 47.

Gregory W. Bray

Deputy Commonwealth Statistician

(a) While the Labour Force Survey is designed primarily to produce reliable estimates at the national and State/Territory level, it also delivers estimates for a number of regions within States. As with national and State estimates, regional labour force estimates are subject to sampling error. Since estimates for regions are components of corresponding estimates at the State level — and are thus based on a considerably smaller sample size — they are subject to higher relative standard error. Care should therefore be taken in interpretation of regional estimates, particularly month to month movements. Tables of standard errors are included in the Technical Note on pages 43–47 of this publication. (b) Previously Manly-Warringah (SR). (c) Excludes components of Far West (SD). These are published as part of Balance of NSW (MSR).

LONG-TERM UNEMPLOYED AS A PROPORTION OF TOTAL UNEMPLOYED, ACT

LABOUR FORCE SUPPLEMENTARY TOPICS

Although emphasis in the population survey is placed on the regular collection of data on demographic and labour force characteristics, supplementary and special surveys of particular aspects of the labour force are carried out from time to time.

It has been recent ABS practice to release statistics from supplementary and special surveys in Section B of 6203.0 Labour Force, Australia. This practice ceased with the release of the February 1996 issue of 6203.0. For future releases of supplementary labour data, separate publications containing summary results and key findings will be produced.

Equivalent tables at the State level are available on microfiche. In addition, other unpublished data can be provided to meet special requirements.

* Standard Data Service

Recent issues of Labour Force, Australia contain the principal results of the following supplementary surveys:

December 1995 issue

- Persons Who Had Re-entered the Labour Force, Australia, July 1995
- Weekly Earnings of Employees (Distribution), Australia, August 1995

January 1996 issue

- Persons Not in the Labour Force, Australia, September 1995
- Working Arrangements, Australia, August 1995

February 1996 issue

- Underemployed Workers, Australia, September 1995

EXPLANATORY NOTES

INTRODUCTION

1 This publication contains estimates of the labour force derived from the labour force survey component of the monthly population survey, which is conducted on a sample basis throughout Australia.

THE POPULATION SURVEY

2 This survey consists of the labour force survey (LFS) and, in most months, one or more supplementary topics. The survey is based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covers slightly less than 0.5% of the population of New South Wales. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

SCOPE

3 The labour force survey includes all persons aged 15 years and over, except:

- (a) members of the permanent defence forces;
- (b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
- (c) overseas residents in Australia; and
- (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

SURVEY SAMPLE REDESIGN

4 Following each Population Census, the ABS redesigns and reselects the LFS to take into account the new information which is obtained from the Census. The sample used in the LFS from September 1987 to August 1992, which was designed and selected using data from the 1986 Census, has been updated and reselected using information collected in the 1991 Census. The new sample was phased in over the period September 1992 to December 1992.

5 For the most part, one quarter of the new sample was introduced each month so that, by December 1992, the entire new sample was in place.

POTENTIAL EFFECTS ON LABOUR FORCE SURVEY ESTIMATES

6 Implications for estimates produced from the LFS due to sample redesign and its implementation are as follows.

- (a) The sampling error overall increased initially by about 7% over the previous level but will decline gradually during the life of the new sample. For State estimates, the initial increase was about 8%, while for the Territories, there was a decrease of 19%. There were also higher standard errors for movements produced over the period September 1992 to December 1992 compared with those for the corresponding series produced prior to this period and from January 1993 onwards. Overall, these were estimated to be up to 20% higher than the normal standard errors on monthly movements.

- (b) Analysis has shown that the unemployment rate is marginally higher (less than 0.5 percentage points on average) for those persons in sample for the first time. Normally, this will not affect the overall estimates of month-to-month movements because the number of persons in the sample does not change significantly. However, during the transition period, there were twice as many people as usual in the sample for the first time. This may have caused a small upward movement (of less than 0.1 percentage points on average) in the unemployment rate from August 1992 to September 1992 and a compensating decrease from December 1992 to January 1993.

7 For further information, see *Information Paper: Labour Force Survey Sample Design* (6269.0).

DEFINITIONS

8 The labour force category to which a person is assigned depends on the actual activity undertaken during the reference week (i.e. whether working, looking for work, etc.). The following definitions, which conform closely to the international standard definitions specified by the International Labour Office (ILO), relate only to those persons within the scope of the survey.

9 *Employed persons* comprise all civilians aged 15 years and over who, during the reference week:

- (a) worked for one hour or more for pay, profit, commission or payment in kind (including employees, employers and self-employed persons) in a job or business, or on a farm; or
- (b) worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

10 Prior to April 1986, unpaid family helpers who worked for 1-14 hours were excluded from the category of employed persons.

11 Employed persons can be classified into:

- (a) *full-time workers* (i.e. those who usually worked 35 hours or more a week (in all jobs) and others who, although usually part-time workers, worked 35 hours or more during the reference week); and
- (b) *part-time workers* (i.e. those who usually worked less than 35 hours a week and who did so during the reference week).

12 *Unemployed persons* are all those aged 15 years and over who were not employed during the reference week, and:

- (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week, and:
 - (i) were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or

- (ii) were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
 - (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.
- 13** *Actively looking for work* includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service notice-boards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.
- 14** *The unemployment rate* for any group is the number unemployed expressed as a percentage of the labour force (i.e. employed plus unemployed) in the same group.
- 15** The *labour force* comprises all persons who, during the reference week, were employed or unemployed as defined above.
- 16** *Long term unemployed* comprises persons unemployed for a period of 52 weeks or more.
- 17** *Persons not in the labour force* are those who, during the reference week, were not in the categories *employed* or *unemployed* as defined above.
- 18** *The labour force participation rate* for any group is the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group.
- 19** *Duration of unemployment* is the period from the time the person began looking for work or was stood down to the end of the reference week.
- 20** *Unemployed persons classified by industry and occupation.* Unemployed persons who had worked full-time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.
- 21** *Industry classification.* From August 1994, Labour Force Survey industry data are classified according to the *Australian and New Zealand Standard Industrial Classification (ANZSIC) 1993 (1292.0)*. For further information about the application of ANZSIC to Labour Force Survey data, see *Information Paper Labour Force Survey: Introduction of ANZSIC for industry data (6259.0)*.
- 22** *Occupation classification.* Occupation data are presented in accordance with the *Australian Standard Classification of Occupations (ASCO) (1221.0 and 1222.0)*.
- 23** *Marital status.* In the labour force survey, persons are classified as *married* or *not married*. Persons are classified as *married* if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey.

	<p>24 <i>Persons attending school or a tertiary educational institution.</i> Persons attending school comprise those aged 15–19 years who, during the reference week, were enrolled full-time at secondary or high schools (including boarding school pupils). Persons attending a tertiary educational institution comprise those aged 15–24 years who were enrolled full-time at universities, colleges of advanced education, technical colleges, colleges of technical and further education, and theological colleges.</p> <p>25 <i>Employment/population ratio.</i> For any group, the number of employed persons expressed as a percentage of the civilian population aged 15 years and over in the same group.</p>
STATISTICAL AREAS	<p>26 The regional structure for NSW used in tables 16–19 is based on the Statistical Region structure of the Australian Standard Geographical Classification (ASGC). For further information concerning statistical areas, please refer to pages 53–57 and the publications <i>Regional Statistics, New South Wales</i> (1304.1) and <i>Australian Standard Geographical Classification</i> (1216.0).</p>
SEASONAL ADJUSTMENT AND TREND ESTIMATION	<p>27 Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not aim to remove the irregular or non-seasonal influences which may be present in any particular month. This means that month-to-month movements of the seasonally adjusted estimates may not be reliable indicators of trend behaviour. For example, irregular factors unrelated to the trend account for more than half the seasonally adjusted movement with the following frequency:</p> <ul style="list-style-type: none"> (a) Employment: 5 in 10 monthly movements (b) Unemployment: 7 in 10 monthly movements (c) Unemployment rate: 7 in 10 monthly movements (d) Participation rate: 9 in 10 monthly movements <p>28 Smoothing seasonally adjusted series produces a measure of the underlying trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson-weighted moving average to the respective seasonally adjusted series. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available.</p> <p>29 Seasonally adjusted series for NSW appear in this publication in Table 2. Trend estimates for NSW and ACT appear in Tables 2 and 21 respectively. Seasonally adjusted data is not available for ACT.</p>
RELIABILITY OF THE ESTIMATES	<p>30 Estimates in this publication are subject to sampling and non-sampling errors. The Technical Note on pages 47–52 of this publication gives information on these sources of error.</p>

ADDITIONAL DATA

32 In addition to the labour force survey, the ABS publishes a wide range of supplementary labour market information. For details see page 39 of this publication.

33 The ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout, clerically-extracted tabulation. In general, a charge is made for providing unpublished information.

ROUNDING

34 Figures have been rounded and discrepancies may occur between sums of the component items and the totals shown.

SYMBOLS AND OTHER USAGES

A	Area
C	City

*	subject to sampling variability too high for most practical purposes. See paragraph 6 of the Technical Note on Data Reliability.
—	nil or rounded to zero (including null cells)

TECHNICAL NOTE ON DATA RELIABILITY

SOURCES OF ERROR

1 There are a number of possible sources of error in sample surveys and these can be classified into two types: *sampling error*; and *non-sampling error*.

NON-SAMPLING ERRORS

2 Non-sampling errors may arise as a result of errors in the reporting, recording or processing of the data and can occur even if there is a complete enumeration of the population. Non-sampling errors can be introduced through: inadequacies in the questionnaire; non-response; inaccurate reporting by respondents; errors in the application of survey procedures; incorrect recording of answers; and errors in data entry and processing.

3 It is difficult to measure the size of the non-sampling errors and the extent of these errors could vary considerably in significance from survey to survey, and from question to question. However, every effort is made in the design of the survey and development of survey procedures to minimise the effect of these errors.

SAMPLING ERRORS

4 Sampling error is the error which occurs by chance because the data were only obtained from a sample, not the entire population.

Standard error of estimates

5 One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the *standard error* (SE). There are about 2 chances in 3 that a survey estimate is within one standard error of the figure that would have been obtained if all persons had been included and about 19 chances in 20 that it is within two standard errors. That is, there are 19 chances in 20 that the true estimate is in the range—

$$X - 2 \times SE(X) \text{ to } X + 2 \times SE(X)$$

(where X is the estimate)

The standard error of an estimate can be obtained from Table A. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in the table (see example below Table A).

6 In the tables in this publication, only estimates with relative standard errors of 25% or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. * 3.4) to indicate they are subject to high standard errors and should be used with caution.

7 The standard error can also be expressed as a percentage of the estimate and this is known as the *relative standard error* (RSE). The RSE is determined by dividing the standard error of an estimate $SE(X)$ by the estimate X and expressing it as a percentage. That is

$$RSE(X) = \frac{SE(X) \times 100}{X}$$

(where X is the estimate)

8 The look up list on the following page provides a guide for the calculation of standard errors and relative standard errors for a range of statistics.

CALCULATING STANDARD ERRORS

The methods described below refer to the calculation of standard errors for NSW estimates. Standard errors of ACT estimates should be calculated from Table C, using column 2 (from September 1992) instead of Table A and column 3 (Monthly movements for December 1992–January 1993 onwards) instead of Table B.

<i>Measure of reliability to be determined</i>	<i>Method</i>
Standard errors of estimates of employed persons.	Determine the SE from Table A directly.
Standard errors of estimates of unemployed persons.	Multiply the SE from Table A by 1.06.
Standard errors of estimates of persons not in the labour force.	Multiply the SE from Table A by 1.1.
Standard errors of rates (e.g. the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).	Determine the RSE of the numerator (X) and the denominator (Y) then apply the following formula. $RSE\left(\frac{X}{Y}\right) = \sqrt{[RSE(X)]^2 + [RSE(Y)]^2}$
Standard error of average duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 1.3.
Standard error of median duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 2.0.
Standard error of monthly movements.	Using Table B, look up the SE of the larger estimate.
Standard error of quarterly movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.11.
Standard error of annual movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.3.

LINEAR INTERPOLATION

9 Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the *size of estimate* column in Tables A or B. Linear interpolation is best described using an example. In February 1996, there were 632 200 (X_e) employed persons working part-time in New South Wales. This estimate falls between the values 5 000 000 (X_l) and 1 000 000 (X_u) in Table A.

10 The standard error of the estimate is determined as follows. Firstly calculate

$$\begin{aligned} F &= \frac{X_e - X_l}{X_u - X_l} \\ &= \frac{632\,200 - 500\,000}{1\,000\,000 - 500\,000} \\ &= 0.26 \end{aligned}$$

11 Secondly, calculate the standard error of the estimate, $SE(X_e)$ thus:

$$\begin{aligned} SE(X_e) &= SE(X_l) + (F \times [SE(X_u) - SE(X_l)]) \\ &= 8\,800 + (0.26 \times [11\,300 - 8\,000]) \\ &= 9\,658 \end{aligned}$$

12 Therefore the standard error of the number of employed persons in February 1996 working part-time in New South Wales (632 200) is 9 658.
